Summary

Software Engineering graduate focused on full-stack development with Java Spring Boot, React and React Native. I like owning a feature end to end: modelling the data, writing the API and shipping the screen people use. Currently building MAIFit, an AI fitness web app, solo from database design to CI/CD and production deployment.

Education

Ho Chi Minh City University of Industry and Trade (HUIT) — Ho Chi Minh City
Bachelor of Software Engineering; GPA: 3.3/4.0 — *2022 – 2026*

Experience

SaigonLab — 05/2025 – 07/2025
AI Research & Technical Writing Intern — *Ho Chi Minh City*

- Researched LLMs and AI coding assistants (ChatGPT, GitHub Copilot, DeepSeek), analyzing their capabilities and how they fit into developer workflows
- Wrote beginner onboarding guides, internal technical references and prompt-engineering playbooks to help developers code faster

Projects

MAIFit – AI Fitness Web App — 10/2026 – Present
Java 25, Spring Boot 4, Spring AI, React, TypeScript, PostgreSQL + pgvector, Docker, GitHub Actions

- Solo full-stack & DevOps project, running in production: auth with email verification, profile, TDEE, body check-ins and calorie tracking; meal photo recognition, rep counting and a RAG chatbot in progress (GitHub)
- Designed calorie logic that does not trust the AI: the model only identifies ingredients and estimates grams, while calories come from a standard foods table (USDA, Vietnam's National Institute of Nutrition), with an `ai_grams` column to measure model error
- Capped AI cost per user with an atomic conditional upsert: a credit is taken before each call and refunded on failure, with no race conditions
- Implemented refresh token rotation with reuse detection, hashed token storage and IDOR checks on every API; private photos are EXIF-stripped and served only with a JWT
- Built the CI/CD pipeline: GitHub Actions builds images to ghcr.io, the VPS pulls and runs them behind Nginx, and Postgres is never exposed publicly

Organic Food – Multi-platform E-commerce — 10/2025 – 12/2025
Java 17, Spring Boot 3, React 19, React Native (Expo), MySQL, PayOS

- Team leader of 2: designed the system logic and MySQL schemas for products, categories and orders (Web) (Mobile)
- Built RESTful APIs with Spring Boot and an admin dashboard for transactions, inventory and order status; integrated them with the React web app
- Integrated the PayOS payment gateway, SMTP email for registration, and member vouchers
- Built the entire React Native mobile app alone, from UI/UX design to API integration, covering the full shopping flow
- Wrote a Python crawler that collected 1,000+ organic products, then used an LLM to generate product and category descriptions

Technical Skills

Languages: Java, JavaScript, TypeScript, Python
Frameworks: Spring Boot, Spring AI, Spring Security, React, React Native, Tailwind CSS
Databases: PostgreSQL (pgvector), MySQL
Tools & DevOps: Git, GitHub Actions, Docker, Nginx, Linux, Postman

Certificates

TOEIC Listening & Reading: 750 (ETS, 2026)
