# PHAM THANH PHUOC SANG

**FRESHER FULL-STACK DEVELOPER**

Born: Dec 18, 2004 Phone: +84 903 915 722 Email: gnasai1218@gmail.com GitHub LinkedIn Portfolio

Location: Ho Chi Minh City, Vietnam

## SUMMARY

Software Engineering graduate from HUIT focused on full-stack development with Java Spring Boot, React and React Native. I like owning a feature end to end: modelling the data, writing the API and shipping the screen people actually use. Currently building MAIFit, an AI fitness web app, on my own from database design to CI/CD and production deployment.

## EDUCATION

**Ho Chi Minh City University of Industry and Trade (HUIT)** *2022 - 2026*

Bachelor of Software Engineering | GPA 3.3/4.0

## TECHNICAL SKILLS

| | |
|---|---|
| **Languages** | Java, JavaScript, TypeScript, Python |
| **Frameworks** | Spring Boot, Spring AI, Spring Security, React, React Native, Tailwind CSS |
| **Databases** | PostgreSQL (pgvector), MySQL |
| **Tools & DevOps** | Git, GitHub Actions, Docker, Nginx, Linux, Postman |

## WORK EXPERIENCE

**SaigonLab** *05/2025 - 07/2025*

***AI Research & Technical Writing Intern***

- Conducted in-depth research on Large Language Models (LLMs) and Generative AI assistants including ChatGPT, GitHub Copilot and DeepSeek to analyze their architecture, technical capabilities and workflow optimizations.
- Created and structured step-by-step user onboarding guidelines and best-practice manuals tailored for beginners to lower the entry barrier for utilizing AI tools.
- Authored comprehensive internal documentation, technical reference guides and prompt-engineering playbooks to maximize developers' coding efficiency and problem-solving velocity.

## PROJECTS

**MAIFit - AI Fitness Web App (in progress)** *10/2026 - Present*

***Java 25, Spring Boot 4, Spring AI, React + TypeScript, PostgreSQL + pgvector, Docker, GitHub Actions***

GitHub Live app: coming soon

Solo Fullstack & DevOps Developer. A personal fitness web app with AI, already running in production.

**RESPONSIBILITIES**

- **AI-safe Calorie Logic:** Designed calorie logic that doesn't trust the AI: the model only identifies ingredients and estimates grams, while calories always come from a standard foods table (USDA and Vietnam's National Institute of Nutrition), with an ai_grams column to measure the model's error.
- **AI Cost Control:** Capped AI usage per user with an atomic conditional upsert: a credit is taken before each call and refunded if the call fails, with no race conditions.
- **Security:** Implemented refresh token rotation that detects reuse of old tokens, stored tokens only as hashes, and added IDOR checks to every API.

- **Privacy:** Stripped EXIF from private photos, served images only with a JWT, never sent body photos to the AI, and encrypted backups with rclone crypt.
- **CI/CD & Infrastructure:** Built the full pipeline: GitHub Actions builds images to ghcr.io, the Singapore VPS only pulls and runs them behind Nginx, and Postgres is never exposed publicly.

**KEY FEATURES**

- **Authentication:** Sign-up, email verification and password reset, with JWT access and refresh tokens.
- **Body Tracking:** Profile, TDEE calculation and body check-ins.
- **Calorie Tracking (in progress):** Meal logging with a monthly calendar and a daily calorie chart.
- **Coming Next:** Meal photo recognition, rep counting with MediaPipe, a RAG chatbot with chat history, and daily, weekly and monthly leaderboards.

### Organic Food - Multi-platform E-commerce Ecosystem

*10/2025 - 12/2025*

***Java 17, Spring Boot 3, React 19, React Native (Expo), MySQL, PayOS***

GitHub (Web) GitHub (Mobile) Docs

Team Leader & Fullstack Developer, team of 2.

**RESPONSIBILITIES**

- **System & Database Design:** Architected the system logic and designed MySQL database schemas to manage products, categories and order data.
- **Full-stack Development:** Built RESTful APIs with Spring Boot and integrated them with a React frontend to display product catalogs and handle user actions.
- **Payment & Communication:** Integrated the PayOS automated payment gateway and implemented SMTP email for registration.
- **End-to-End Mobile:** Independently developed the React Native app from UI/UX design to API integration, covering the entire shopping flow.
- **Data Crawling & AI Content:** Developed a Python crawler to collect 1,000+ organic product listings (names, images, prices), then used an LLM to generate product and category descriptions, delivering a fully populated catalog from day one.

**KEY FEATURES**

- **Core E-commerce:** Product lists, shopping cart and a streamlined checkout process.
- **Member & Voucher Management:** Member registration, secure login, and viewing and applying discount vouchers.
- **Admin Control:** Internal dashboard for monitoring transactions, managing inventory and tracking order status.
- **Data Integration:** Seamless data synchronization between the Spring Boot backend and both web and mobile apps.

## CERTIFICATES

### TOEIC Listening & Reading - 750 Score

*2026*

Educational Testing Service (ETS)
